Article Overview

Cable tray connection plates are installed using methods such as splice plates, coupler plates, adjustable plates, and universal kits, each secured with bolts, nuts, and washers to ensure mechanical strength and electrical continuity.

Common Installation Methods

1. Standard Splice Plate

- Used to join two straight sections of cable tray.
- The plate is positioned on both sides of the tray rails, and bolts clamp the sections together tightly.
- Provides strong mechanical support and is compatible with most tray types . 2.

Coupler Plate for Fittings

- Designed for bends, risers, reducers, or other tray fittings.
- Matches the shape of the fitting to ensure a seamless transition between sections.
- Maintains structural integrity and proper cable routing . 3. Adjustable Joint Plate
- Allows slight movement to correct misalignment during installation.

- Useful in field adjustments where tray sections are not perfectly aligned.
- Provides flexibility without compromising strength . 4. Universal Splice Kit
- Includes plates and hardware compatible with multiple tray types.
- Convenient for stock management and emergency repairs.
- Simplifies installation across different tray systems
