

Cable tray well type support

Article Overview

Well-type cable tray support provides a rigid, enclosed channel for routing and securing cables, ideal for protecting cables from mechanical damage and environmental exposure.

Overview of Well-Type Cable Tray Support

A well-type cable tray is a type of cable support system designed with a solid or partially enclosed bottom and sidewalls, forming a "well" that houses cables securely. This design is particularly useful in applications where mechanical protection, visual aesthetics, or minimal heat buildup is required. Well-type trays can be made from steel, stainless steel, aluminum, or FRP, depending on environmental conditions and corrosion resistance needs.

Support Methods

Well-type trays require mechanical support elements to maintain stability and load-bearing capacity. Common support methods include:

- Wall-mounted brackets: Attach the tray directly to walls for vertical or horizontal runs.
- Suspended supports: Use rods or hangers from ceilings to support overhead tray runs.
- Center supports: Provide additional support for long spans to prevent sagging.
- Floor-mounted supports: Used when trays are installed at ground level or in raised-floor systems. The spacing and type of support depend on tray material, cable wei...
