

Connect the optical module to the switch for internet access

Article Overview

To connect an optical module to a switch, insert the correct SFP transceiver into the switch port, attach duplex fiber cables with matching LC connectors, and ensure proper send/receive orientation for a stable internet connection.

Step 1: Choose the Correct SFP Module

Select an SFP or SFP+ transceiver compatible with your switch and fiber type. Use multimode (OM3) fiber for short distances and single-mode (OS2) fiber for longer runs. Ensure the module matches the network speed (1G for SFP, 10G for SFP+) and the fiber connector type, typically LC duplex .

Step 2: Prepare the Fiber Cable

Use duplex fiber optic cables with LC connectors. Pre-terminated cables are recommended to avoid field termination errors. Ensure the cable is clean and free of dust or debris, as contamination can degrade signal quality .

Step 3: Insert the SFP Module

- Handle the SFP module carefully to avoid electrostatic discharge (ESD) or physical damage .
- Align the module with the switch port and gently insert until it clicks into place. Do not force it, as this can damage the port or module
