

Distribution Network Automation Construction Scheme in Honduras

Article Overview

Honduras is advancing its electrical distribution network through automation projects, SCADA integration, and efficiency-focused construction schemes led by both local companies and international partners.

Overview of Automation Initiatives

Honduras has been actively modernizing its electricity distribution system to reduce technical and non-technical losses, improve reliability, and enhance customer service. Since 2016, the Government of Honduras, in collaboration with Manitoba Hydro International (MHI), has implemented a seven-year management and investment program to separate distribution and energy commercialization from the National Company of Electric Energy (ENEE). This initiative includes technical supervision, strategic planning, and operational control to optimize the distribution network. Key achievements include a 46.5% reduction in the System Average Interruption Frequency Index (SAIFI) and a 68.7% decrease in interruption duration, demonstrating the effectiveness of automation and monitoring systems.

Local Companies and Technical Capabilities

Several Honduran companies provide expertise in distribution network automation and construction:

- PCA HN specializes in industrial electrical installations, SCADA systems, PLC integr...
