

# Exposed wires leading from the distribution box

## Article Overview

Exposed wires from a distribution box are extremely hazardous and should never be left unprotected, as they pose serious risks of electrical shock and fire.

### Safety Risks

Exposed electrical wires, whether live or presumed dead, present immediate dangers. Contact with a live wire can cause severe electrical shock, burns, nervous system disruption, or even cardiac arrest, depending on the current and path through the body. Additionally, exposed wires can create short circuits or arcing, which may ignite nearby materials and start a fire . Even neutral wires or disconnected wires should be treated as potentially live until verified safe .

### Causes of Exposed Wires

Exposed wires can result from damaged insulation, improper installation, rodent damage, or incomplete work on electrical systems. In distribution boxes, wires may be left dangling after maintenance or equipment removal, creating a hidden hazard if not properly documented or enclosed .

### Proper Handling and Compliance

- Do not touch exposed wires: Always assume wires are live until tested with appropriate tools ....
