

Fiberglass Cable Trays for Communications

Article Overview

Fiberglass (FRP) cable trays provide durable, corrosion-resistant, and non-conductive support for communication and instrumentation cables, ideal for harsh or sensitive environments.

Overview

Fiberglass cable trays, also known as FRP or GRP cable trays, are structural support systems designed to route and protect electrical and communication cables. They are manufactured from fiber-reinforced polyester or vinyl ester resins, offering high corrosion resistance, long service life, and low maintenance compared with traditional steel or aluminum trays. Their non-conductive nature makes them particularly suitable for sensitive communication lines, as they do not interfere with radio, radar, or microwave signals.

Types of Fiberglass Cable Trays

- Ladder Type
 - Features two side rails connected by transverse rungs.
 - Open design allows excellent ventilation and heat dissipation, suitable for power and large-diameter control cables.
 - Easy to install and modify, recommended for industrial plants and substations.
- Trough or Channel Type
 - Has a bottom plate with side rails for better protection while still allowing some ve...
