

Home electrical distribution box sliding box

Article Overview

A sliding or adjustable home electrical distribution box can be safely installed by selecting the correct location, securing the box with internal rails, and following proper wiring and grounding procedures.

Choosing the Right Box and Location

Select a SLIDERBOX® or similar adjustable wall box suitable for your wall thickness (1/2" to 1 3/8" for walls, 1/2" to 1-5/32" for ceilings) and the number of circuits required (single, two, three, or four gang) . Ensure the installation site is dry, ventilated, and easily accessible, away from flammable or corrosive materials, and at a convenient height (typically around 1.5 meters for residential use) .

Preparing for Installation

- Survey the wall to determine the exact placement. For old work, mark the cutout area using the box template.
- Check wall thickness and adjust the slider plate to align the box flush with the wall surface .
- Gather tools: screwdriver, level, wire stripper, drill, and multimeter for testing .

Mounting the Sliding Box

- Position the box in the wall cutout. The internal rails guide the slider plate for smooth adjustment without removing mounting screws .
- Secure the box using the molded Speed Klamps™ or screws provided. Ensure the...
