

How long does it take to move the distribution box

Article Overview

Moving a distribution box typically takes between 4 hours and 2 days, depending on complexity, accessibility, and additional work required.

Typical Duration

The time required to relocate a distribution box or electrical panel varies based on several factors. For a standard home with average complexity, the process usually takes one business day or roughly 4 to 8 hours if the installation is straightforward . In more complex situations—such as homes with many circuits, difficult access, or the need to extend the main service line—the work can take up to 1–3 days or 8–24 hours .

Factors Affecting Time

- Number of circuits and wiring complexity: More circuits require additional splicing, junction boxes, and wire extensions, which increases the duration .
- Accessibility of the new location: Moving the panel to a hard-to-reach area or through walls may require cutting grooves or adjusting the main line .
- Additional work: Upgrades to the panel, compliance with modern electrical codes, or installation of surge protection can extend the timeline .
- Coordination with utilities: Scheduling power disconnects, inspections, or permits may add extra time, sometimes stretching the total project to a week
