

How much does a 100-watt laser diode cost

Article Overview

A 100-watt laser diode typically costs between \$200 and \$600, depending on specifications and supplier.

Price Range and Factors

The cost of a 100W laser diode varies based on wavelength, spectral properties, package type, and cooling requirements. High-volume consumer wavelengths, such as 445nm blue or 650nm red, are generally more affordable, while specialty wavelengths or narrow-linewidth diodes can be more expensive. On marketplaces like eBay and AliExpress, 100W laser diodes are commonly listed in the \$200-\$600 range, with some variations depending on shipping, brand, and included accessories.

Additional Considerations

- **Cooling and Mounting:** High-power diodes generate significant heat, so active cooling (water-cooled heatsinks or high-speed fans) is required, which can add to the overall cost.
- **Drivers and Power Supply:** A 100W diode typically requires a driver capable of supplying up to 10A, which is an additional expense.
- **Application Requirements:** Industrial or semi-professional use, such as metal engraving or cutting plastics, may justify higher-quality diodes with better beam quality or longer lifespan
