

How much does a temperature-measuring optical cable cost in Kuwait

Article Overview

The price of temperature-measuring optical cable in Kuwait typically ranges from \$50 to \$200 per meter, depending on the technology and specifications.

Pricing Overview

The cost of fiber optic temperature-measuring cables varies significantly based on the type of sensor technology:

- **Distributed Temperature Sensing (DTS) cables:** These allow continuous temperature measurement along the entire length of the fiber and are ideal for long-distance monitoring in industrial plants, tunnels, or power facilities. DTS cables are more expensive due to the complexity of the system and the need for advanced interrogation units. Prices for distributed fiber optic temperature systems can range from \$10,000 to \$50,000 or more for complete systems, with the per-meter cost typically falling between \$50 and \$200 depending on length, resolution, and environmental specifications .
- **Fiber Bragg Grating (FBG) sensors:** These are used for precise point measurements and can be multiplexed along a single fiber. Individual FBG sensors cost \$500 to \$2,000, but when integrated into a cable system, the per-meter cost is generally lower than DTS but still significant for high-accuracy applications .
- **Fluorescence-based sensors:** These are mid- to high-end solutions, often used in transformer monitoring and high-voltage applications. The cost is influenced by accuracy and stability requirements, with regional applications in Kuwait and neigh...
