

# How to cut a straight tee connector on a cable tray

## Article Overview

Cutting a straight tee connector on a cable tray involves marking, cutting, deburring, and drilling holes for secure attachment, using proper tools and safety precautions.

### Step-by-Step Guide

1. Prepare the Tray and Workspace Place the cable tray on a stable surface and ensure it is supported to prevent bending. Wear protective gloves and safety glasses to protect against sharp edges and metal debris during cutting and drilling ( ). 2. Mark the Cut Measure and mark the section of the tray where the tee connector will be formed. Use a straight edge or template to ensure accuracy. For wire mesh trays, mark the cross wires to guide the cut ( ). 3. Cutting the Tray

- For metal trays, use an angle grinder, metal cutting circular saw, or a bolt cutter for wire mesh trays.
- For wire mesh trays, position the tray open-side down and cut each cross wire perpendicular to the wire using an angular bolt cutter to create a clean cut ( ).
- Avoid center-cut blades for wire mesh trays to maintain structural integrity ( ). 4. Deburr the Edges After cutting, deburr all sharp edges using a file or deburring tool to prevent injury and ensure a smooth fit for connectors ( ). 5. Drill Connector Holes If the tray is unperforated, drill holes for the straight connector and joint plates. The number of holes depends on tray width and height (e.g., 4 screws per connector for 60 mm side height, 3 screws per joint plate for 300 mm width) ( ). 6. Attach the Tee Connector...
