

How to get cables into the fiber optic ODF rack

Article Overview

Feed fiber optic cables into the ODF rack by preparing the rack and cables, stripping and protecting fibers, routing them through splice trays, and terminating connectors while maintaining proper bend radius and labeling.

Step 1: Prepare Tools and Materials

Before starting, gather the necessary tools and materials: fiber optic cables, patch cords, connectors, cleaver, splicer, fiber tester, cleaning kit, safety goggles, and cable management accessories such as zip ties or Velcro straps . Ensure the ODF rack is properly installed, grounded, and has sufficient space for cable routing .

Step 2: Plan Cable Entry

Decide whether cables will enter the ODF from the top, bottom, or side. Standard racks allow top entry via cable racks or bottom entry through raised floor openings. Use breakout plates or horizontal/vertical plates to secure the cable sheath, central strength member, Kevlar, and tubes . Seal ducts or microducts to prevent moisture, dust, or rodent intrusion.

Step 3: Strip and Protect Fibers

Strip the outer jacket of the fiber cable carefully using a fiber stripper, exposing the individual fibers without damaging them. Install protection connectors or bare fiber...
