

How to use a fiber optic transceiver on a router

Article Overview

To use a router with a fiber optic transceiver, you connect the fiber cable to an Optical Network Terminal (ONT), then link the ONT to your router via Ethernet.

Required Equipment

- Optical Network Terminal (ONT): Converts the optical signal from the fiber into an electrical signal your router can use .
- Fiber optic cable: Usually provided by your ISP, with connectors like SC/APC or LC .
- Router: Ensure it has a WAN or SFP port compatible with the ONT .
- Ethernet cable (Cat5e or higher): Connects the ONT to the router .

Step-by-Step Setup

- Install the ONT
- Locate the fiber wall outlet where the ISP's fiber line enters your home.
- Connect the fiber optic cable to the ONT's optical port, handling the connector carefully to avoid dirt or damage .
- Power on the ONT and wait for the status lights to stabilize, indicating a successful connection to the ISP network .
- Connect the ONT to the Router
- Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the router's WAN port .
- Power on the router and wait for the indicator lights to confirm a successful connection .
