

Inquiry about QSFP optical module LPO

Overview

Amphenol's QSFP-DD Linear Pluggable Optical (LPO) Transceiver delivers low-latency, high-bandwidth PCIe[®] Gen 5.0 over optical link, enabling scalable server disaggregation and efficient rack-to-rack interconnects ideal for AI/ML and rack-scale data center expansion. The idea is simple: instead of a DSP (digital signal processor) inside the module – replacing it with transimpedance amplifier (TIA) and a driver chip with high linearity and EQ capability – LPO shifts signal processing into. 800G LPOs are designed without DSPs or CDRs, resulting in significantly lower power consumption and dramatically reduce latency compared to conventional DSP based solutions. The reduction in latency and power has become a key driver for the growing demand for LPOs in applications such as. In 2025, the optical transceiver market has shifted decisively. While 100G remains the workhorse for enterprise edges, the core data center has rapidly migrated to 400G (QSFP-DD) and is actively piloting 800G deployments. 5Km optical communication applications. The module converts 4 channels of 100Gb/s (PAM4) electrical input data to 4 channels of parallel optical signals, each capable of 100Gb/s operation for an aggregate data rate of 400Gb/s.

800G QSFP-DD LPO 2DR4

Linktel's LPO portfolio consists of both QSFP-DD and OSFP modules. Linktel Technologies provides high-quality and cutting-edge products and solutions for high speed optical I/O connectivity, including ...

Aug 18, 2025

QSFP-DD Optical Transceivers for High-Speed Connections

QSFP-DD ports incorporate a riding heatsink that can be sized independently of the optical module, added on top of the module, or placed between modules. This flexibility enables switch and routing ...
