

Kyrgyzstan Distributor Anti-Calibrating Optical Cable ADSS

Article Overview

ADSS (All-Dielectric Self-Supporting) optical cables with anti-tracking sheathing are designed for high-voltage aerial deployment, providing reliable communication while resisting electrical and environmental stress.

Overview of ADSS Cables

ADSS cables are non-metallic optical fiber cables capable of supporting themselves between towers without additional support structures, making them ideal for installation along high-voltage transmission lines . They are lightweight, small in diameter, and can span up to 700-800 meters between support towers, reducing mechanical load on the structures . The optical fibers inside are protected from strain and moisture, ensuring low optical loss over long distances, with single cables capable of carrying up to 864 fibers .

Anti-Tracking Sheathing

In high-voltage environments, surface leakage currents can occur on the cable due to potential differences between the cable and the power line, especially in humid or polluted conditions. This can lead to arcing and dendritic burn marks on the cable surface . To prevent this, ADSS cables use anti-tracking sheathing materials, which typically include:

- Polyethylene base material...
