

# Location of the third-level distribution box

## Article Overview

The third-level distribution box, or switch box, is installed close to the electrical equipment it controls, typically within 3 meters horizontally, and in a ventilated, dry, and safe area.

### Location Relative to Other Distribution Levels

The third-level distribution box is the final stage in a three-level power distribution system. It receives power from the second-level distribution box and directly supplies electrical equipment, either a single device or a group of similar devices . Unlike the main or secondary distribution boxes, it is closely connected to the equipment it controls, ensuring efficient and safe power delivery .

### Distance Requirements

- The horizontal distance between the switch box and the fixed electrical equipment it controls should not exceed 3 meters .
- The distance from the second-level distribution box should generally be less than 30 meters to maintain proper voltage and safety standards .

### Installation Environment

- Must be installed in a ventilated, dry, and normal temperature location.
- Avoid areas with gas, smoke, steam, liquids, vibration, impact, or heat sources th...
