

No response after plugging in the fiber optic cable

Article Overview

No response after connecting a fiber optic cable is often caused by loose connections, dirty connectors, or hardware issues, all of which can be systematically checked and resolved.

Step 1: Inspect Physical Connections

Ensure the fiber optic cable is properly seated in both the device and the output port. Loose or misaligned connectors are a common cause of no signal. Check for visible damage, sharp bends, or kinks in the cable, as these can disrupt light transmission .

Step 2: Clean the Connectors

Fiber connectors are highly sensitive to dust, oil, or debris. Use lint-free wipes and isopropyl alcohol or a fiber cleaning pen to clean the ferrule end faces. Follow an inspect → clean → inspect → mate workflow to ensure contamination is removed .

Step 3: Check Indicator Lights and Devices

Look for LOS (Loss of Signal) LEDs on transceivers or network devices. If lit, this indicates a connectivity issue. Restart devices such as switches, routers, or optical network terminals (ONTs) to resolve temporary glitches .

Step 4: Test Signal Strength...
