

Outdoor On-site Monitoring of Optical Cables

Overview

This Recommendation deals with outdoor optical fibre maintenance support, monitoring and testing systems for both trunk and access optical fibre cable networks. It describes fundamental requirements, principles, and architecture to develop a suitable guide to design. Cable monitoring involves the continuous surveillance and management of cable systems to ensure their optimal functioning. As you work in the telecommunications field, you face complex challenges from rapid network growth and increasing data demands. GLSUN's fiber cable monitoring system combines with OTDR, optical switches and network management software to form speedy. The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications. ITU-T is responsible for studying technical, operating and tariff questions and issuing. Fiber SenSys®, Inc.
