

Router fiber optic signal light is green

Article Overview

A solid green light on your fiber optic router generally indicates that the device is powered on and connected to the network, functioning normally.

Solid Green Light

A solid green light on your fiber optic router typically means that the router is powered on and successfully connected to the internet through the WAN or fiber network port, indicating normal operation and active connectivity to your Internet Service Provider (ISP) . For fiber routers, this often corresponds to the PON (Passive Optical Network) light, which should remain solid when the optical signal is within the normal range of -20 dBm to -27 dBm .

Blinking Green Light

If the green light is blinking, it usually indicates that data is actively being transmitted between your router and the internet. This is normal during web browsing, streaming, or downloading content . Rapid, irregular blinking is a positive sign of active network traffic, while slow, rhythmic blinking may indicate the router is still establishing a connection or booting up .

Troubleshooting Tips

- Ensure all cables, including the fiber optic and Ethernet connections, are securely plugged in .
- If the green light does not appear or the router fails to connect, try power cycling...
