

SC pigtail fiber FC pigtail fiber

Article Overview

An FC-SC fiber optic pigtail is a short fiber cable with an FC connector on one end and a bare fiber on the other, designed for splicing and reliable network termination.

Overview

A fiber optic pigtail is a short length of fiber cable with a factory-installed connector on one end and an exposed fiber on the other. The connectorized end, in this case an FC connector, can be plugged into equipment such as transceivers or patch panels, while the bare fiber end is intended for fusion or mechanical splicing to a fiber trunk or distribution cable . This design ensures low insertion loss and minimal return loss, providing a high-performance connection point .

FC Connector Features

- Screw-on design: Provides a secure and stable connection, ideal for high-vibration environments .
- Compatibility: Works with single-mode or multimode fibers depending on the pigtail type.
- Polish options: Available in UPC (Ultra Physical Contact) or APC (Angled Physical Contact) to reduce back reflection, critical for analog video, CATV, and DWDM systems .

Applications

FC-SC pigtails are commonly used in:....
