

Surface-mounted plastic distribution box

Article Overview

Surface-mounted plastic distribution boxes are versatile electrical enclosures designed for indoor and outdoor use, offering protection for circuit breakers and wiring with various module capacities and IP ratings.

Key Features

Material and Construction: Most surface-mounted plastic distribution boxes are made from flame-retardant, UV-stable ABS or thermoplastic, ensuring durability, halogen-free compliance, and resistance to environmental factors. They are lightweight and easy to install on walls or other surfaces.

Protection Ratings:

- IP40: Suitable for indoor use, protecting against solid objects larger than 1 mm and limited contact.

- IP65: Dust-tight and low-pressure water-resistant, ideal for outdoor applications such as garden power distribution or temporary construction points.

Module Capacity: Boxes are available in a wide range of sizes, typically from 2 to 56 modules, accommodating different project requirements. Some series, like DISBOX-T, offer 12 to 42 module slots with options for white or transparent doors.

Doors and Access: Options include transparent, smoked, or solid doors, with standard locks or optional security locks to prevent unauthorized access. Transparent lids allow easy inspection of internal components without opening the box.

Installation Features: Surface-mounted boxes come with DIN rails, neutral and earth terminal bars, and all necessary mounting hardware for quick installation. Some models include blind covers for unused module slots and offer screwless or double-row terminals for flexible wiring.
