

Switch configuration inside the distribution box

Article Overview

Configuring a distribution switch involves connecting via console, setting up VLANs, assigning IP addresses, and linking access switches for proper network traffic aggregation.

Step 1: Connect to the Switch

Use a console cable (often a rollover cable) to connect your computer to the switch. Open a terminal emulator like PuTTY and select the appropriate serial connection speed (commonly 9600 bps) to access the switch CLI (Command Line Interface) for configuration .

Step 2: Initial Setup

- Power on the switch and verify that all indicator lights are functioning.
- Erase previous configurations if using a spare switch (e.g., delete flash:vlan.dat on Cisco switches) to start fresh .
- Enter privileged EXEC mode by typing enable and then access Global Configuration Mode with configure terminal .

Step 3: Set Hostname and Domain

Assign a hostname to identify the switch in the network and configure a domain name if required. This helps in managing multiple switches and VTP (Virtual Trunkin...
