

The cable tray opening was not sealed

LoRawan outdoor base station

Overview

Water ingress: If the cable tray is not properly sealed, water can enter and damage the cables and insulation. This can cause shorts, grounds, or corrosion. The two most common methods to transition from a cable tray to the equipment are: Cables or conductors leaving the cable tray and entering the equipment through a raceway with a bushing on the end (see image A). Recognizing and addressing these failures early can prevent more severe issues. This guide discusses common cable tray problems, from loosening and corrosion to grounding issues and installation errors, along. Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed with firestopping materials in accordance with design requirements. It occurs when the protective coating.
