

The router s fiber optic light is blue

Article Overview

A solid blue light on a fiber optic router generally indicates that the router is powered on and successfully connected to the internet, while a blinking blue light usually means it is attempting to establish a connection.

Meaning of the Blue Light

- **Solid Blue Light:** This typically means your router is powered on and has an active internet connection through the WAN port, indicating that your ISP connection is functioning properly .
- **Blinking Blue Light:** A blinking blue light usually indicates that the router is in the process of connecting to the internet or transferring data. Once the connection is established, the light should turn solid .
- **Device-Specific Variations:** Some routers may use blue lights for other functions, such as Bluetooth pairing or manufacturer-specific indicators, so it's important to check your router's manual if the behavior seems unusual .

Troubleshooting If Internet Is Not Working

Even if the blue light is solid, you might still experience connectivity issues. Common steps include:

- **Restart the Router:** Power cycle the router by turning it off, waiting 10-30 seconds, and turning it back on. This can resolve temporary glitches .
- **Check Fiber Connections:** Ensure the fiber optic cable is securely connected to the router and the Fiber Jack. A loose or dirty connector can cause intermittent issues .
- **Perform a Hard Reset:** If restarting doesn't help, a hard reset can clear the router's...
