

Triple Play Fiber Optic Cable Distribution Box

Article Overview

A Triple Play Fiber Optic Distribution Box is a key component in fiber networks that delivers voice, data, and video services to end users, supporting multiple ports and integration with OLTs, ONUs, and splitters.

Overview

A Triple Play Fiber Optic Distribution Box is designed to manage and distribute optical signals for voice, internet, and CATV services over a single fiber network. It serves as a central point for terminating fiber cables, connecting optical network terminals (ONTs/ONUs), and integrating passive optical network (PON) components like splitters and WDM devices . These boxes are essential in FTTH (Fiber to the Home) deployments and GPON/EPON systems, ensuring reliable signal distribution and convergence of multiple services .

Key Features

- **Port Options:** Common configurations include 4, 8, 16, 24, 36, and 48 ports, allowing flexible deployment depending on subscriber density .
- **Dual-Layer Design:** Supports direct fiber termination and distribution via built-in mini splitters, enabling 1:2 to 2:32 splits .
- **IP Rating and Cable Management:** Designed to maintain IP protection before and after installation, with cable exits compatible with FTTH drop flat cables .
- **Integration with Network Components:** Works with OLTs (Optical Line Terminals),...
