

Waterproof cable tray bending

Article Overview

Bending waterproof cable trays requires proper preparation, suitable tools, and careful attention to material properties to maintain structural integrity and waterproofing.

Types of Waterproof Cable Trays

Waterproof cable trays are commonly made from GRP (Glass Reinforced Plastic) or coated metals. GRP trays are lightweight, corrosion-resistant, and non-conductive, making them ideal for wet or outdoor environments, while coated metal trays (e.g., electro-zinc or powder-coated steel) provide durability and corrosion protection .

Preparation Before Bending

- **Inspection:** Check the tray for cracks, dents, or defects that could compromise strength during bending .
- **Cleaning:** Remove dirt, debris, and moisture using a mild detergent and water, ensuring the tray is dry before bending .
- **Measurement:** Accurately measure the tray length, width, depth, and mark the exact bend location and angle using a protractor or angle tool .

Tools and Techniques

- **Cable Tray Bender:** Manual, hydraulic, or electric benders are used depending on tray material and size .
- **Support and Clamping:** Use brackets, clamps, or vices to hold the tray securely during bending
