

What size tubing clamp is needed for an 8-core optical cable

Article Overview

For an 8-core optical cable with a typical outer diameter of 3-5 mm, a Figure-8 drop cable clamp designed for 3-5 mm wire is recommended.

Recommended Clamp Type

For 8-core optical cables, especially those with a figure-8 design, a Figure-8 drop cable clamp is ideal. These clamps are specifically engineered to secure 8-shaped optical cables with wire diameters ranging from 3 mm to 5 mm, ensuring a firm grip without damaging the cable insulation (Fibconet) .

Material and Durability

High-quality clamps are usually made from stainless steel suspension wire and aluminum die-cast shells, providing excellent corrosion resistance, tensile strength, and abrasion resistance. They are suitable for outdoor installations and can withstand temperatures from -40°C to 80°C (Fibconet) .

Installation Considerations

- Hook-and-lock structure allows easy attachment to fiber poles.
- Can be used standalone or integrated with anchor FTTX fiber clamps or tap cable brackets.
- For aerial installations, 3-bolt suspension clamps are also suitable for figure-8 cabl...
