

What type of fiber optic cable connector

Article Overview

Common fiber optic cable connectors include SC, LC, ST, FC, and MPO/MTP, each designed for specific applications, ferrule sizes, and coupling mechanisms.

Overview of Fiber Optic Connectors

Fiber optic connectors are mechanical devices that align and join optical fibers, allowing light to pass through with minimal loss. Unlike permanent splicing, connectors enable easy connection and disconnection, making them ideal for maintenance and flexible network configurations. All connectors feature a ferrule, which precisely aligns the fiber cores, and a protective housing to ensure durability and low signal loss. Connectors are categorized by fiber mode (single-mode or multimode), ferrule size, coupling mechanism, and polishing type (PC, UPC, APC) to optimize performance for different environments .

Common Connector Types

- SC (Subscriber Connector): Square-shaped with a push-pull coupling mechanism, SC connectors use a 2.5 mm ferrule. They are widely used in FTTH, PON, and CATV networks due to their durability, low insertion loss, and ease of installation .
- LC (Lucent Connector): A miniaturized version of SC with a 1.25 mm ferrule and latch-style mechanism. LC connectors are ideal for high-density applications in data centers and SFP modules, supporting duplex or simplex configurations .
- ST (Straight Tip): Features a bayonet twist-lock coupling and a 2.5 mm ferrule. ST connectors are common in legacy multimode networks, industrial setups, and campus LANs, valued for robust mechanical connections
